

Let's get some exercise!

Use the editor on this page to answer some questions from the Chinook database. Write down your answers using [the Template \(/files/YOURNAME.sql\)](#).

Think about what the question asks you to do. Are you simply displaying the data, or are you filtering, and/or sorting?

This is also a chance for you to practice formatting your code properly. And remember - if you have any questions, just ask me!

Here's one thing I want you think really hard about: **How will you make sure that the results you get are the right results?**

Questions:

1. What are the media types in the MediaType table? Use a `SELECT` statement to show them.
2. What are the employees' full names? Show this in a single column called "Employee Names". *Note: don't forget to put a space between first and last names, or a comma and a space if you put the last name first.*
3. Select the sum of 987 plus 789, divided by 111. *Hint: it's 16 - don't forget about BEDMAS!.*
4. Select the rows for all the customers in Brazil and Canada.
5. Who are all the customers with hotmail addresses? *Hint: there are other hotmail "top level domains" besides '.com', for example "hotmail.co.uk".*
6. Who are all the customers who don't have a company listed?
7. What are the genres whose name begins with a letter in the second half of the alphabet?
8. List the cities with employees, reverse alphabetically. *Hint: a list of things shouldn't contain duplicates.*

Interactive editor not available in printed form.

As a reminder, here are the names of the tables in the Chinook database:

Artist

Album
